EXPLORE THE POLLINATOR GARDEN

Pollen is transferred by pollinators, which can be the wind, water or animals. Once pollination takes place, seeds begin to grow.

Pollinators are the creatures that pollinate flowers. Can you spot any around the Pollinator Garden?

Can you find all these fantastic pollinating plants around the Pollinator Garden?

This plant has furry leaves. To help protect from the cold & hot sun.

Some plants are yet to flower, when you visit again they will have grown into beautiful orange poppies & large purple artichoke heads.

Turn over the page to create your own flower pot with some of the flowers you’ve seen.
